Cognitive science is the interdisciplinary study of mind and intelligence, embracing philosophy, psychology, artificial intelligence, neuroscience, linguistics, and anthropology. Its intellectual origins are in the mid-1950s when researchers in several fields began to develop theories of mind based on cognitive science: Cognitive science, the interdisciplinary scientific investigation of the mind and intelligence. It encompasses the ideas and methods of psychology, linguistics, philosophy, computer science, artificial intelligence (AI), neuroscience (see neurology), and anthropology. The term cognition, as used by Schema, in social science, mental structures that an individual uses to organize knowledge and guide cognitive processes and behaviour. People use schemata (the plural of schema) to categorize objects and events based on common elements and characteristics and thus interpret and predict the world.
