

# **Download Data Security And Performance Overhead In A Distributed Architecture System**

Oracle Database Architecture. An Oracle database is a collection of data treated as a unit. The purpose of a database is to store and retrieve related information. This reference guide is a work in progress. The source for this guide can be found in the `_src/main/asciidoc` directory of the HBase source. This reference guide is marked up using AsciiDoc from which the finished guide is generated as part of the 'site' build target. A database is an organized collection of data, generally stored and accessed electronically from a computer system. Where databases are more complex they are often developed using formal design and modeling techniques. Apache Hadoop (/ h ? ? d u ? p /) is a collection of open-source software utilities that facilitate using a network of many computers to solve problems involving massive amounts of data and computation.
