Geochemistry Overview. The term Geochemical Analysis is used today to describe a multi-element analysis where a large suite of elements are determined to an intermediate level of accuracy. Geochemistry/Assay Overview. Actlabs is accredited to both ISO 17025 with CAN-P-1579 for specific registered tests. Geological materials which can be analyzed include rocks, soils, organic matter, water and heavy minerals. Torkelson Geochemistry, Inc. (TGI) provides analytical services and consultation useful for evaluating petroleum contaminated sites. Utilizing hydrocarbon fingerprinting we provide assessment, remediation and litigation services. Geochemistry is the science that uses the tools and principles of chemistry to explain the mechanisms behind major geological systems such as the Earth's crust and its oceans.
