Anesthesia & Hypoxia ©G.M. Woerlee, 2005–2019. Hypoxia has many different causes, but the bottom line is that metabolism in the cells of the body receive too little oxygen to function normally. The healing process is a dynamic circle that starts with injury and ends with recovery. This process becomes less efficient as we age (Gosain and Dipietro, 2004), and reciprocally, incomplete healing results in cell senescence and accelerated aging (Valentijn et al., 2018).
