System engineering is an important technology discipline where practitioners are charged with taking many different and complex technical components and assembling them into a functional system that meets business objectives and security requirements at the same time. Behind the scenes of our new design system ... For example, our user avatar element might be initially defined by a style guide, but its end use in the platform can take on hundreds of permutations, making it difficult to successfully update the avatar element down the road." Emergency-stop switches, generally referred to as E-Stops, help ensure the safety of people and machinery by delivering a consistent and predictable fail-safe response. Constructability & Safe Design Principles serves as a preliminary process to provide Parsons Engineers, and the Construction Management Engineers an easy methodology to identify constructability issues & hazards that are likely to arise in the erection process and provide reasonable design features to preclude potential peril in the design ...
