Windows Server 2012 R2 – DHCP High Availability / Fail-over Setup Guide (Part 2) Similar to past articles this series of basic deployment articles will be used to capture a specific environment to also be used as the foundation for many Skype for Business (SfB) Server 2015 specific deployment articles. Windows Server 2012, codenamed "Windows Server 8", is the fifth release of Windows Server. It is the server version of Windows 8 and succeeds Windows Server 2008 R2. Multiarea OSPF Overview. Multiarea OSPF is used in large or enterprise networks where there are so many routers that having every router communicating every link in their link state database with every other router in the network, even when it is a small change becomes taxing on the network.
